A vertical red bar on the left side of the slide contains a collage of white icons representing various IT and cloud concepts: a cloud with a keyhole, a database cylinder, a server rack, a computer monitor, a cloud with an upward arrow, and several 'X' marks.

Agenda:

- Introduction to Satellite
 - Content Management
 - Patch Management
 - Provisioning Management
 - Subscription Management
- Example Deployments
- Demos
 - Subscriptions and Content
 - Client Work
 - Provisioning

Introduction to Satellite

Content Management

Content Repository any type of content made available to any host

Curation of content prior to distribution

Distribution of content as close as possible to the end point.

Patch Management

Report on hosts that need updates, fixes, or enhancements

Group homogeneous systems so that you can easily work with them

Respond quickly to patching requirements using scalable automation

Provisioning Management

Provision to bare metal, virtual, private, and public clouds

Import non-provisioned hosts

Automate using Ansible roles to perform post-provisioning steps

Subscription Management

Centrally manage subscription usage

Maintain accurate inventory and utilization information

Report on subscription consumption

IDC ROI Study of Red Hat Satellite

A single system administrator using Red Hat Satellite can manage more Red Hat Enterprise Linux servers and cut administration costs.

KEY RESULTS:

416%

5 year ROI

28%

Reduction in
total cost of operations

6 MONTH

Payback period

56%

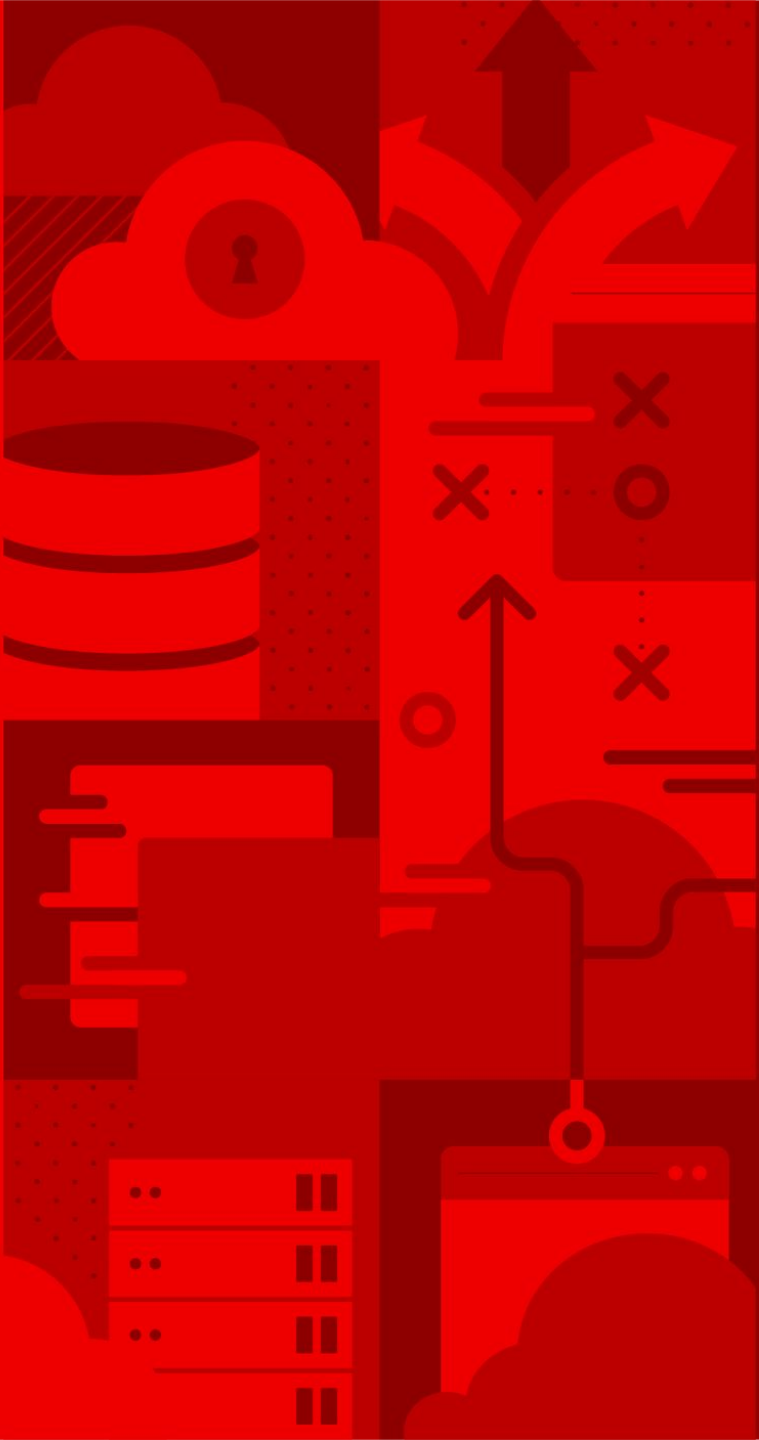

More efficient patching

78%

Faster deployment of new VMs

56%

More efficient IT
infrastructure management

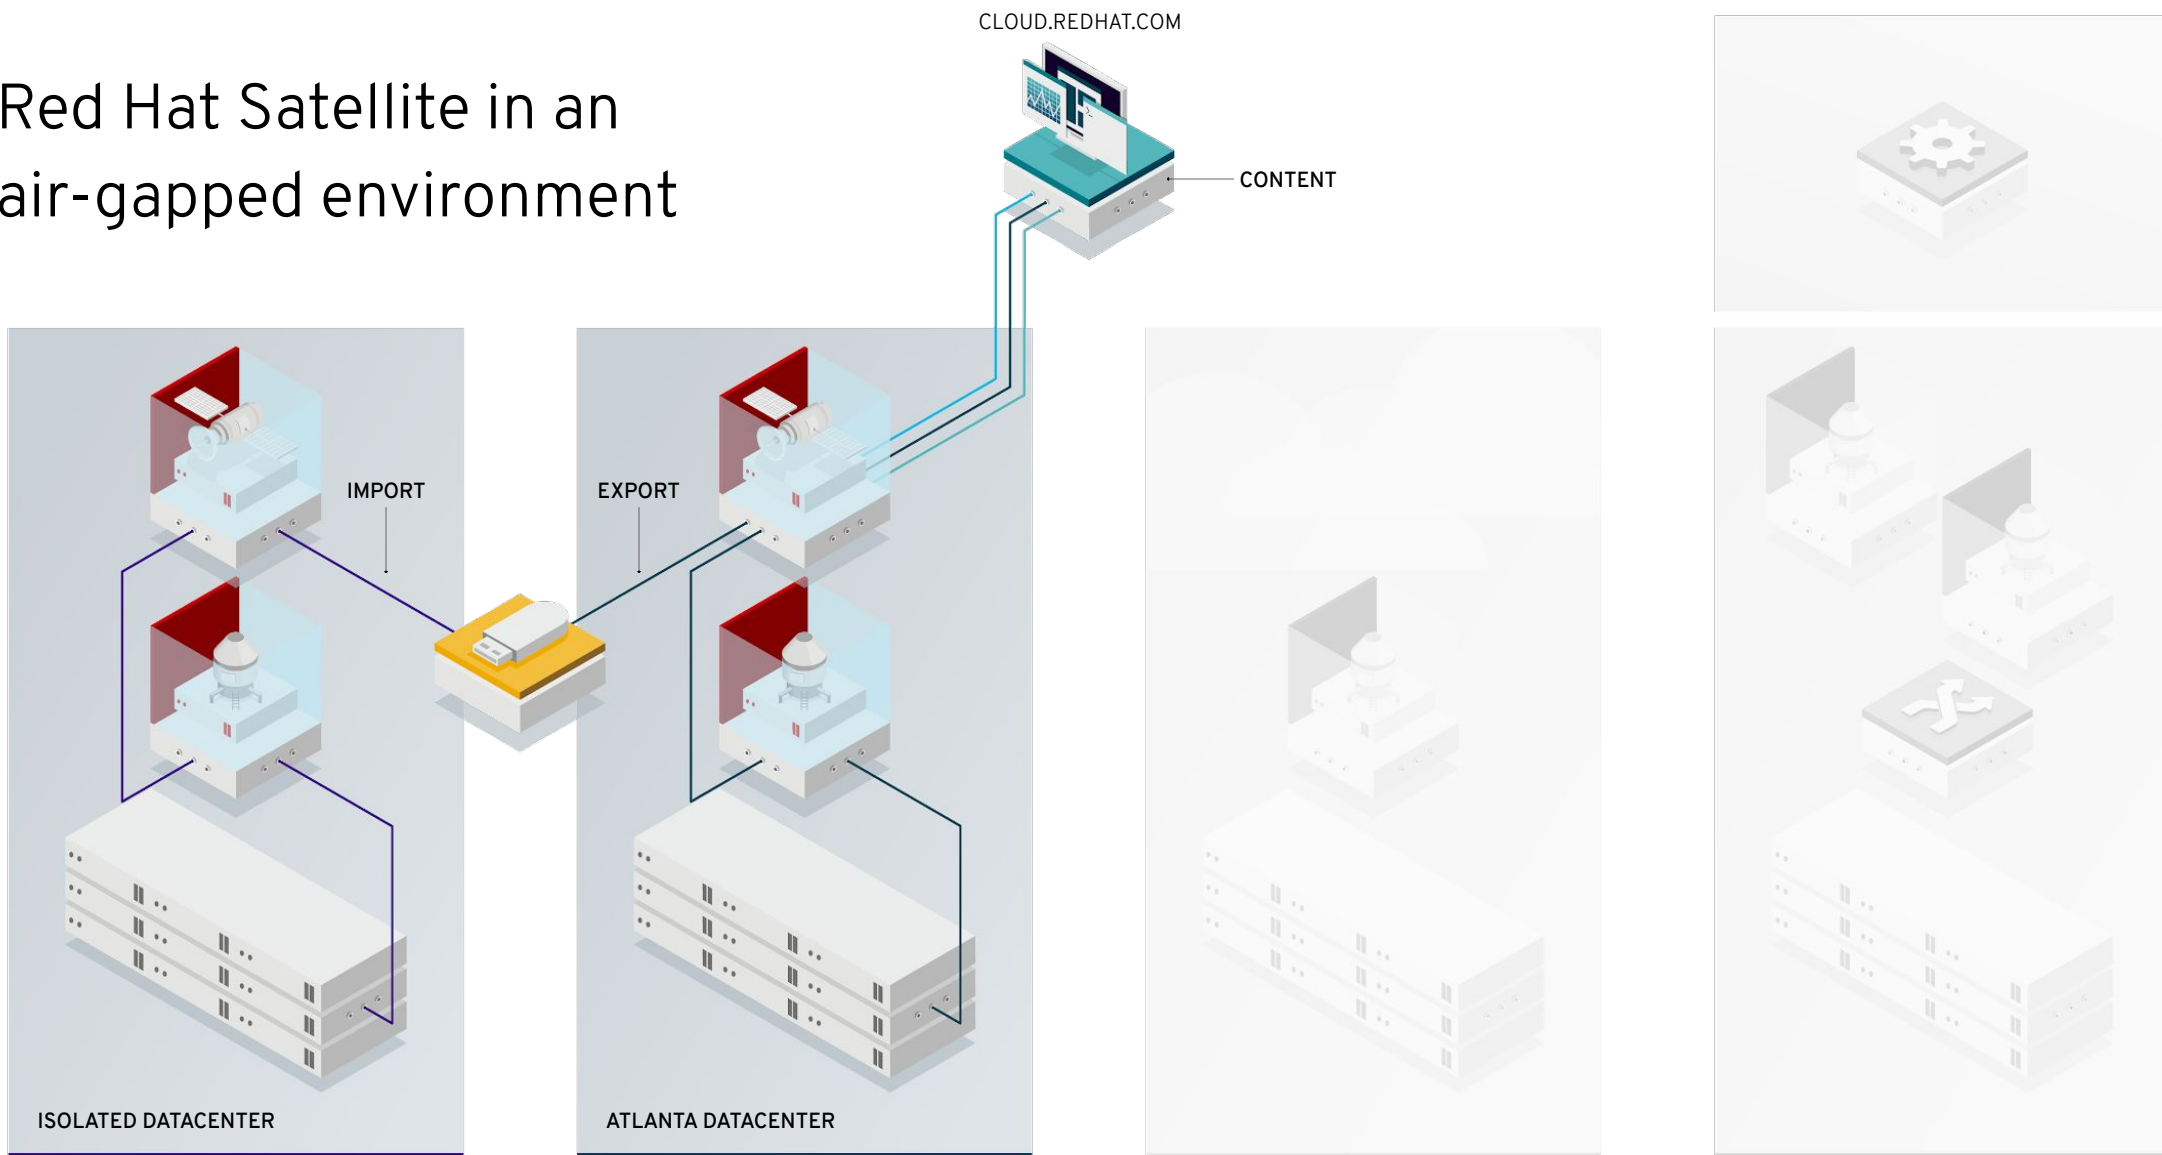

Example Deployments

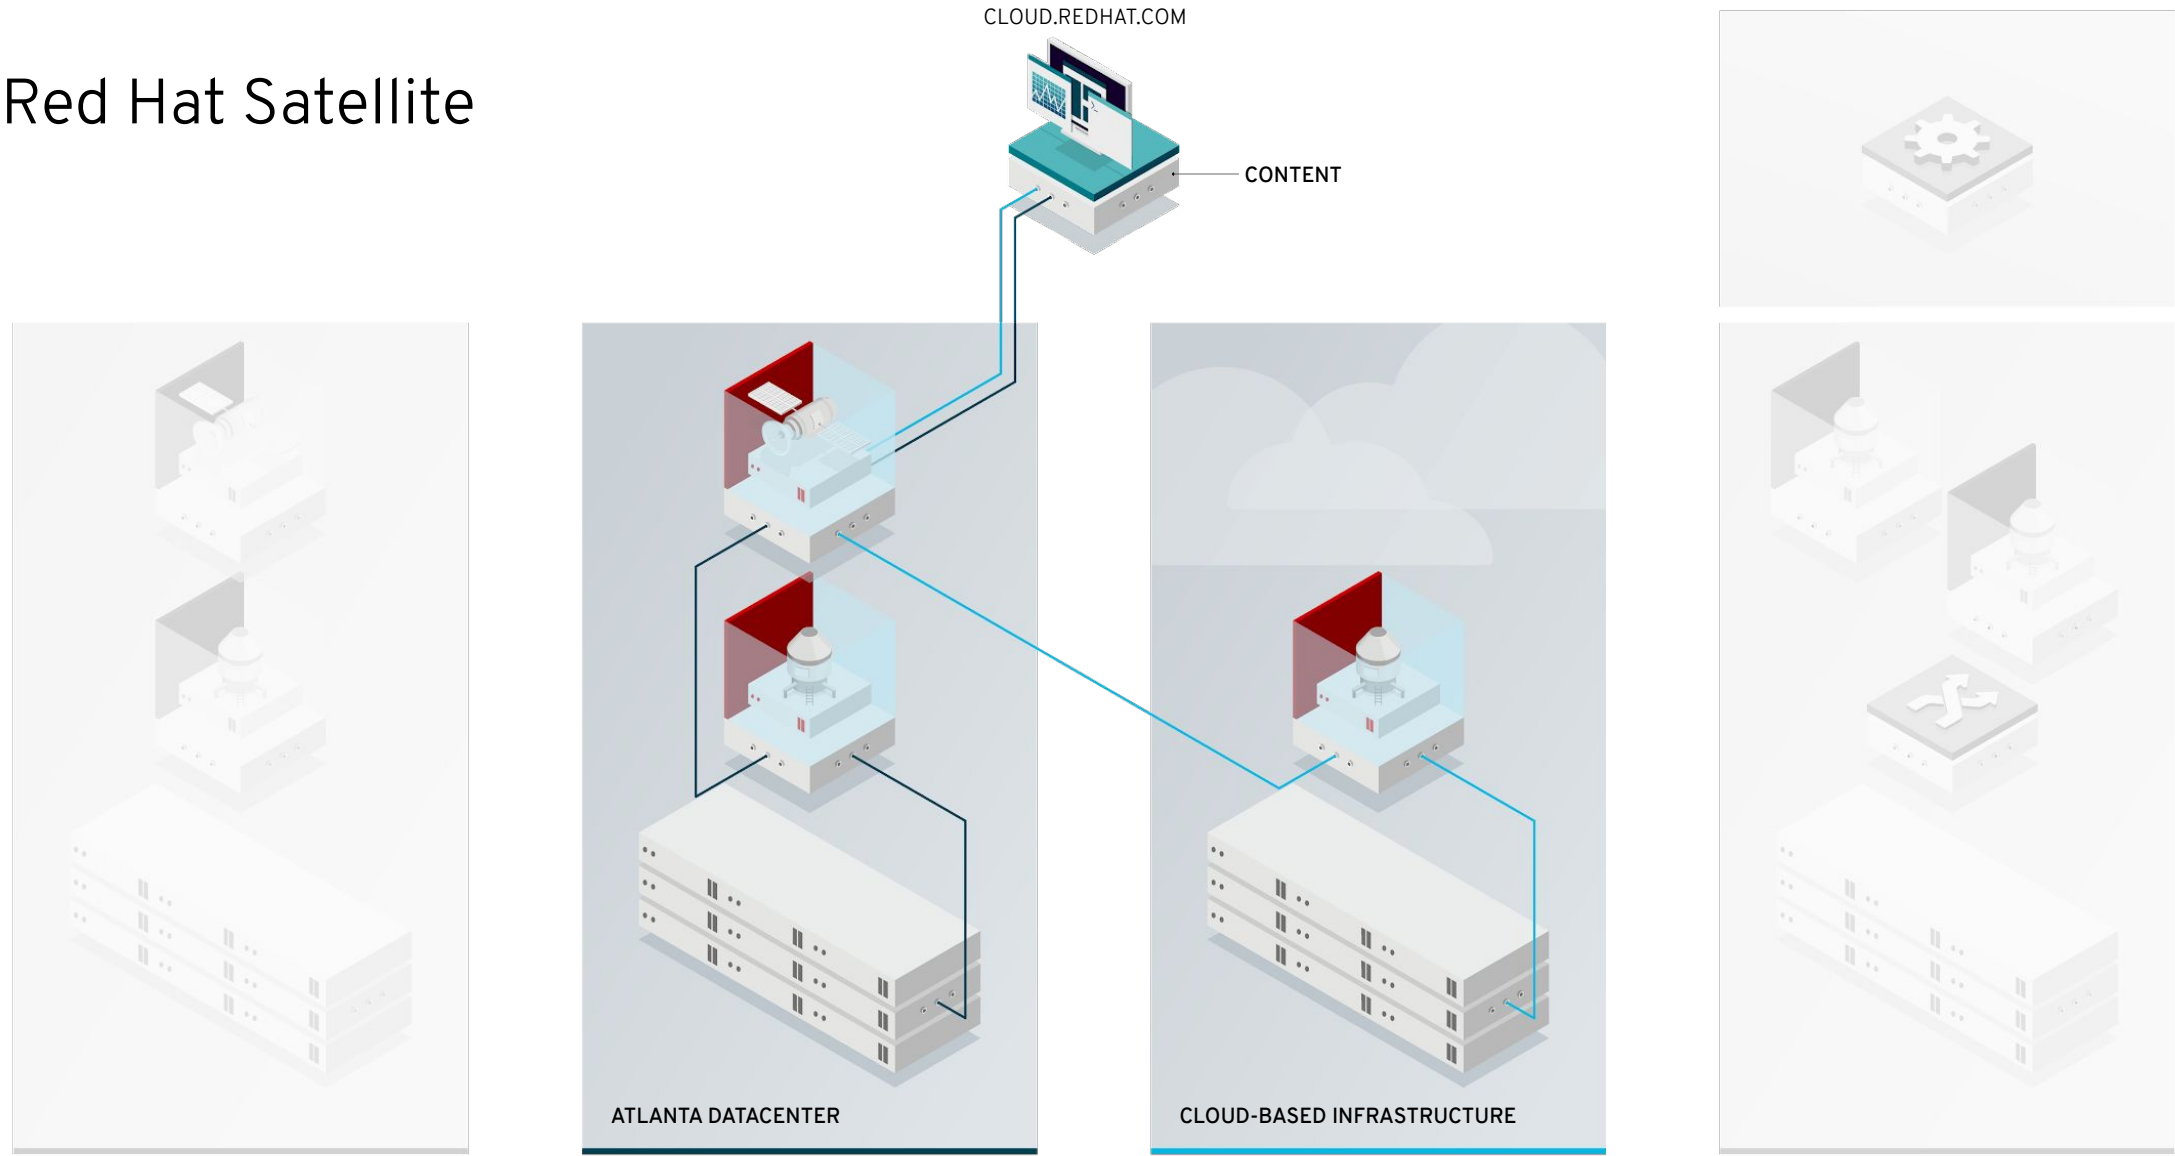

Red Hat Satellite

Red Hat Satellite in an air-gapped environment

Red Hat Satellite

Red Hat Satellite with cloud services

Red Hat Satellite overview
